

War Robots Cheats & Workshop Component Crafting 2026

Component Calculation, Silver Efficiency & Production Queue Optimization

Executive Summary: Master War Robots cheats for Workshop 2.0 component production in 2026. Calculate exact Silver costs and timeframes for building top-tier robots and weapons.

1. Workshop Production Mechanics

Workshop 2.0 allows players to produce 60 or 400 components per slot every 1 day or 3 days. Unlocking all 6 production slots is essential for steady equipment output.

2. Component Crafting Cost Breakdown

Production Batch	Time Duration	Silver Cost	Component Output
1-Day Batch (6 Slots)	24 Hours	360,000 - 500,000 Ag	360 Components
3-Day Batch (6 Slots)	72 Hours	1,200,000+ Ag	2,400 Components
Full Item Build (10k)	approx. 28 Days	15M - 20M Silver	10,000 Total

3. Queue Management Strategy

Maintain 1-day crafting cycles if logging in daily, as 1-day batches offer better component-per-hour efficiency. Use 3-day batches only when away for extended periods.
